Professional Summary

Computer Science undergraduate with hands-on experience in **AI Engineering**, **Full-Stack Development**, and **Intelligent Automation**. Currently developing enterprise AI solutions as a **Summer Intern at Cognizant** and previously worked as an **AI Trainer at Outlier AI**, as an individual contractor specializing in LLM evaluation and prompt engineering. Passionate about building **scalable AI-powered applications**, **automation systems**, and **production-ready software** that solve real-world problems.

Work Experience

Cognizant Technology Solutions

Summer Intern *Jun'26 – Present*

- Contributed to the development of AI- and automation-driven solutions for enterprise workflows within a client delivery team.
- Worked on multiple AI use cases involving **Large Language Models**, **prompt engineering**, and workflow automation.
- Collaborated with cross-functional team members to analyze requirements and **develop AI-powered** proof-of-concepts for enterprise applications.

Projects

AI Friend | PyTorch, Vision-Language Models, Rust, ONNX, Qdrant Oct'25 – Present

- Fine-tuned 32kHz voice synthesis models using **PyTorch** and engineered an LLM appraisal pipeline that dynamically adjusts generation parameters (*temperature, top-p*) based on real-time cognitive state drift.
- Built a real-time Vision-Language Model (**LLaVA/Moondream**) perception pipeline and optimized inference using a **Rust (PyO3) visual habituation filter**, cutting redundant VLM processing by **over 80%**.
- Architected a custom **LLM/VLM evaluation harness** for fine-tuning validation alongside a hybrid **vector-graph RAG system** (Qdrant & Neo4j) achieving **sub-300ms end-to-end response times**.
- Github Repository Link: https://github.com/Aniket-a14/AI_friend

SRA | Next.js 16, TypeScript, Prisma 7, PostgreSQL, Upstash, Terraform, Docker Sep'25 – Present

- Engineered an enterprise AI ecosystem generating SRS specs with BYOK multi-LLM orchestration (Gemini, OpenAI, Claude, Grok), processing **32K+ token** specifications with automated context compaction.
- Designed a serverless **5-layer pipeline** and Multi-Agent System (Product Owner, Architect, Dev Agents) replacing **6+** manual deliverables with automated DFDs and self-healing diagrams.
- Reduced manual requirement effort by **70–80%** while eliminating ambiguity via **pgvector** hybrid search, automated 6Cs quality audits, and a CLI Spec-to-Code traceability engine.
- Github Repository Link: https://github.com/Aniket-a14/SRA

Wizard-w1 | Python, DeepSeek-R1, Qwen2.5, SentenceTransformers, Docker May'25

- Engineered a dual-brain open-weight LLM pipeline (**DeepSeek-R1** & **Qwen2.5-Coder**) with structured chain-of-thought planning and double-blind execution.
- Achieved **500% faster inference** at **<500MB RAM** by integrating Ollama speculative decoding (1.5B/7B models) and SentenceTransformers semantic vector caching.
- Created a multi-agent evaluation harness (**The Council**) with closed-loop auto-healing to intercept tracebacks and perform real-time model self-correction.
- Github Repository Link: https://github.com/Aniket-a14/Wizard-w1

Certifications

- **Social Networks | NPTEL** Nov'25
  Studied **graph theory**, **network analysis**, and **information diffusion models**, enabling deeper understanding of **information flow**, **system interactions**, and **data relationships** in large-scale systems.

Certificates

- **TCP/IP and Advanced Topics | Coursera** Nov'24
  Studied **TCP/IP protocols**, **network layers**, and advanced communication concepts, enabling deeper understanding of **distributed systems**, **network interactions**, and real-world system behavior.
- **Digital Systems: From Logic Gates to Processors | Coursera** Oct'24
  Learned **digital logic design**, **processor architecture**, and low-level computation, strengthening system-level reasoning and understanding of how software interacts with hardware.
- **Basic Python towards ML/AI | CSE Pathshala** Mar'24
  Completed a **25-hour live training program** covering Python fundamentals and introductory ML concepts, building practical understanding of **programming for data processing**, **problem solving**, and foundational AI workflows.

Achievements

- Research paper titled **"A Novel Framework for Improved Cognitive, Emotional, and Vocal Interaction in Conversational Humanoid Robots Assisted by Hybrid Neuromodulatory Network Architecture"** accepted **with Major Revisions** at the **4th International Conference on Intelligent Cyber Physical Systems and Internet of Things (ICoICI 2026)**, with inclusion in the conference proceedings upon successful revision. *Jul' 26*
- Active **open-source contributor**, publishing reusable components and projects on **GitHub** and contributing to the **Coder Legion** community, collaborating with practical experience in real-world codebases. *Nov' 25 – Present*
- Solved **1100+** algorithmic problems across **LeetCode**, **HackerRank**, **CodeChef**, **Codeforces**, and **GeeksforGeeks**, strengthening **data structures**, **algorithms**, and consistent problem-solving ability across competitive programming platforms. *Dec' 24 – Present*

Techincal Skills

Languages: Python, TypeScript, JavaScript
Frameworks: React, Next.js, FastAPI, Express.js
AI/ML: LLM Agents, RAG Pipelines, Prompt Engineering, Ollama
Systems & Tools: Docker, Terraform, Git, Postman, Kubernetes, Linux
Databases: PostgreSQL, MySQL, MongoDB, Prisma ORM

Education

Lovely Professional University Phagwara, Punjab
Bachelor of Technology in Computer Science and Engineering - CGPA: 7.69 *Aug'23 – Present*

Indira Gandhi Memorial High School Barasat, West Bengal
Intermediate - Percentage: 75% *Mar'22 – May'23*

St. Stephen's School Habra, West Bengal
Matriculation - Percentage: 86% *Mar'20 – May'21*
